SUMMARY

Results-driven Software Engineer with **3+** years of experience developing scalable **full-stack** applications using **Node.js, React, Next.js, Java, Spring Boot**, and **SQL/NoSQL** databases, with expertise in **Azure DevOps**, and **CI/CD** pipelines for efficient software delivery. **Expertise extends** beyond full-stack development to include hands-on experience in **DevOps, Data Engineering, and Distributed Systems**, gained through personal projects and **system-building** efforts in academic projects. Driven by a passion for **continuous learning** and **innovation**, with a keen interest in **exploring Large Language Models (AI), distributed systems, application security, and software delivery**. **Dedicated** to turning innovative ideas into impactful solutions, driven by a relentless pursuit of excellence in a fast-evolving tech landscape.

TECHNICAL SKILLS & CERTIFICATIONS

Languages: Go, Java, Python, C/C++, SQL, JavaScript, HTML/CSS, TypeScript, Bash

Tools & Frameworks: Next.js, React.js, Tailwind CSS, Figma, Flask, Spring Boot, Spring MVC, Django, REST APIs, Postman, Playwright, Stripe, VS Code, PyCharm, IntelliJ, GoLand.

Databases & Data Engineering: MySQL, Supabase, MongoDB, Postgres, Spring Data JPA, Drizzle ORM, Apache Kafka, Apache Pinot, Airflow, Apache Superset, Hadoop, PySpark.

Cloud & DevOps: AWS, Azure, OCI, Vercel, Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, Argo CD, Azure DevOps, Git, Linux.

AI & ML: Langchain, AstraDB, Langsmith, Redis (Upstash), Gemini AI, Pandas, NumPy, Matplotlib, TensorFlow, ScikitLearn, PyTorch.

Professional Skills: Strong Organization and Communication Skills, Creative Thinker, Flexible, Adaptable, Problem Solving, Can Do.

Cloud Certifications: AWS Developer Associate, Microsoft Azure Certified Data Scientist Associate (DP-100), OCI Certified Gen Ai Professional, OCI Certified Ai Foundations Associate

EXPERIENCE

Full Stack Developer Intern

June 2024 – Aug. 2024

Hive-Unified Collegiate Platform

Buffalo, NY

- Developed and launched a unified college website with student onboarding, interactive daily polls, and dynamic dashboards using **Next.js, React** and **TypeScript** for an enhanced user experience.
- Integrated **Drizzle ORM** with **Supabase** for efficient and scalable database management, alongside **NextAuth** (JWT strategy) for secure authentication
- Implemented **SendGrid** for automated email communication and leveraged **Jest** for unit testing to ensure robust functionality across key components.

Graduate Research Assistant

Jan. 2024 – May 2024

OneDataShare | IBM

Buffalo, NY

- Contributed to a research project developing a **Spring Boot**-based microservices backend and a **React** frontend, ensuring scalability and efficiency.
- Designed and implemented key microservices using **Spring MVC, JPA, Spring Security, JWT authentication**, and **MongoDB** for secure and efficient data handling.
- Integrated **Eureka Server** for service discovery, containerized microservices with **Docker**, leveraged **Log4j** for efficient logging, and utilized **Lombok** to reduce boilerplate code.
- Enhanced API reliability with **JUnit, TestNG**, and **MockMVC** testing, while documenting services using **Swagger** for clear API communication.

Software Developer

Sep. 2022 – July 2023

Caterpillar PVT LTD

Chennai, India

- Contributed to **React** and **Next.js** projects, building responsive and efficient websites that improved overall user experience and site performance.
- Spearheaded **Playwright** automation testing for over **25** components, ensuring seamless UI functionality and enhancing component reliability using **TypeScript**.
- Developed expertise in **Figma**, mastering **UI/UX** design principles and collaborating on component design to deliver visually appealing and user-friendly interfaces.
- Worked with **Azure DevOps**, managing **Azure Pipelines, Repos**, and **Boards** to drive continuous integration, version control, and project delivery.

Software Engineer

Feb. 2021 – Sep 2022

Cognizant Technology Solutions | Client: CVS Pharmacy

Chennai, India

- Implemented five microservices, Containerized them with **Docker**, published images to **Docker Hub**, and implemented CI workflows using **GitHub Actions** for efficient automation.
- Designed secure **OAuth2** authentication with Spring Security and **Keycloak**, configured **API Gateway** with aggregated **Swagger** docs, and enabled event-driven communication via **RabbitMQ**.
- Enhanced observability with **Grafana**, **Prometheus**, **Log4j**, **Loki** (Promtail), and **Tempo** for centralized logging and tracing, while implementing **Redis caching** and mail notifications.
- Developed and executed web automation scripts using **Java**, **Selenium**, and **TestNG**.
- Implemented distributed locking for scheduled cron jobs in a distributed environment, ensuring consistency, and enhanced microservices reliability using resilience patterns like retry, circuit breaker, and fallback mechanisms.

EDUCATION

University At Buffalo

Buffalo, NY

Masters Of Science in Computer Science

3.5/4.0

ACADEMIC PROJECTS

TACO DB | C++, Database Systems, Algorithms, Data Structures

- Contributed to the development of a highly efficient DBMS by implementing POSIX-based file I/O, designed buffer management, and optimized data page structures for efficient record storage and retrieval.
- Designed an iterator-based query processor to handle selection, projection, and aggregation, improving execution efficiency for single-table queries.
- Built a B-Tree index system to enhance data retrieval speed, supporting efficient search, insertion, and deletion operations
- Implemented Cartesian product, sort-merge join, and index nested-loop join to optimize multi-table query execution and improve database performance.

Modern Text Chat Application | C/C++, Networking Concepts, TCP & Sockets

- Designed and implemented client-server components for reliable communication, leveraging the `select()` system call for efficient multi-socket handling in a single-threaded environment.
- Developed key user functionalities like login, message broadcasting, private messaging, and a centralized server for seamless interaction.
- Integrated a command-line interface with commands (LIST, IP, PORT, LOGIN, REFRESH, EXIT), message buffering for offline clients, client blocking/unblocking, and login tracking, enhancing user management and system robustness.
- Implemented three reliable transport protocols: ABT (stop-and-wait), GBN (sliding window with full retransmission on loss), and SR (selective retransmission of lost packets).

Pint OS | C, Threading, Scheduling, System Calls, Operating Systems

- Developed a priority thread scheduler with FIFO, preemption, and dynamic priority changes to enhance thread management and system responsiveness.
- Optimized thread sleep behavior by removing busy-waiting loops, improving CPU utilization.
- Solved priority inversion with priority donation and implemented the Multi-Level Feedback Queue Scheduler (MLFQS) for dynamic priority adjustments.
- Enabled argument passing and system call handling in Pintos, supporting commands like 'exit' and 'write' with error handling and stack-based argument passing for seamless execution.

POSITIONS OF RESPONSIBILITY

General Secretary

Aug. 2020 – June 2021

Rotaract Club of Sathyabama, Sathyabama University.

Chennai, India

Professional Service Director

Aug. 2019 – June 2020

Rotaract Club of Sathyabama, Sathyabama University.

Chennai, India

Intern Team Lead

Feb. 2021 – May 2021

Cognizant Technology Solutions

Chennai, India

PERSONAL PROJECTS

Advanced DevSecOps Pipeline | *Jenkins, AWS, Argo CD, Terraform*

- Designed and deployed a scalable Three-Tier architecture on AWS EKS, automating infrastructure with Terraform & integrating DevSecOps best practices using OWASP Dependency Check, Trivy, and SonarQube in CI/CD.
- Developed Jenkins pipelines for app deployment (Docker, security scans, ECR, ArgoCD) and EKS management (Terraform LifeCycle). Set up Prometheus & Grafana for monitoring and cost optimization using CAST AI.
- Established a jump server for secure cluster access and management. Configured Kubernetes networking & security with NGINX Ingress, AWS ALB, IAM, Secrets, and Kyverno. Leveraged ArgoCD for GitOps-driven deployments.

Real Time Data Warehousing | *Python, Apache Pinot, Apache Kafka, Apache Superset, Apache Airflow*

- Designed and implemented a real-time ETL data warehouse architecture leveraging Apache Airflow, Kafka, and Apache Pinot to support both batch and streaming data pipelines.
- Developed custom Apache Airflow hooks to seamlessly integrate Kafka and Apache Pinot, enhancing real-time data ingestion and ETL efficiency.
- Optimized data visualization and reporting by integrating Apache Pinot with Kafka and building insightful dashboards in Apache Superset, utilizing dimensional modeling for improved data organization and analytics.
- Deployed project applications, including Apache Airflow, Kafka, Apache Pinot, and Apache Superset, using Docker containers orchestrated via Docker Compose.
